

Make the Move to FlexNet Operations Cloud

Reduce infrastructure burden, access new capabilities faster, and give your teams more time to focus on revenue growth.

Many organizations have relied on **FlexNet Operations On-Premises** successfully for years. But as software businesses move toward subscription, usage-based, consumption, SaaS, and hybrid monetization models, maintaining licensing infrastructure internally can slow innovation and consume valuable IT resources.

FlexNet Operations Cloud helps producers reduce operational overhead, access continuous innovation, and support modern monetization strategies without managing the platform infrastructure themselves.

Key Benefits:

- Reduce operational overhead by eliminating the need to manage upgrades, patching, databases, backups, and infrastructure internally.
- Access new capabilities faster through regular cloud releases with no major upgrade projects required.
- Benefit from ongoing innovation, with access to features including analytics, Contained Registry Service, and Revenera MCP Server

Cloud vs On-Premises: Who Manages What?

Capability	On-Prem	Cloud
Infrastructure	Customer	
Upgrade execution	Customer	
Patch management	Customer	
Database admin	Customer	
Backup and recovery	Customer	
Scalability	Customer	
Uptime	Customer	
Redundancy / Failover	Customer	
Security	Customer	
Release cadence	Bi-annually	Monthly

Cloud vs On-Premises: Feature Comparison

Features	On-Prem	Cloud
License Technology Compatibility (FlexNet Publisher, FlexNet Embedded, Custom)	✓	✓
Cloud Monetization Module (Cloud Servers, Metered Licensing, Cloud Monetization API)	✓	✓
Electronic Software Delivery (Portal Download)	✓	✓
In-Product Software Updating (REST API)	✗	✓
Container/Helm Chart Delivery (Harbor Registry Pull)	✗	✓
Dynamic Monetization (Elastic Access / Consumptive Tokens)	✗	✓
Data Analytics (Out-of-the-Box Configurable Reports)	✗	✓
End-portal for your customers	✗	✓
Salesforce Connector and other planned integrations	✗	✓
Contained registry service	✗	✓
Snowflake Data Share / Data Access API	✗	✓
MCP server support	✗	✓
